

# We offer you our product and technology platforms as OEM solutions!

**We have a strong technology base** – for our OEM customers from a wide range of industries, we develop and produce sensor technology that make life more efficient, more convenient and safer. In addition, we have many years of experience in the field of lighting technology and convince in the future market of communication technology with clever innovations.

To avoid having to reinvent the wheel, we offer existing solutions as OEM variants with the minimum requirement of an optical and/or functional modification. The following product or technology platforms serve as a basis:

## True Presence® Technology

Steinel True Presence® multi-sensor technology can be used to detect not only human presence but also brightness, room temperature, humidity, air pressure, air quality, volatile organic compounds (VOC) and CO<sub>2</sub>.

## Intelligent High-Frequency Technology

This technology distinguishes human movements from those of bushes, small animals and rain. The detection radius of max. 7m in all three dimensions can be precisely adjusted to the individual needs of the user.

## Optical Sensor Technology

Worldwide unique optical sensor technology, detects and counts sitting and standing people in up to ten precisely defined detection zones.

## Passive Infrared Technology

Passive infrared technology is the all-rounder when it comes to the detection of large areas, such as warehouses, driveways or sports halls. A range of up to 20m and mounting heights of up to 14m are possible.
